

ACADEMIC ATTENDANCE ANALYSIS REPORT

Grades 1 to 12 • Annual Trends, Cyclical Variances, and Senior Dropoff

Class Attendance Summary Table

Class / Grade	Average Attendance %	Class / Grade	Average Attendance %
1st Grade	93.50%	7th Grade	83.50%
2nd Grade	91.00%	8th Grade	87.00%
3rd Grade	89.50%	9th Grade	88.50%
4th Grade	88.00%	10th Grade	89.00%
5th Grade	86.50%	11th Grade	79.00%
6th Grade	85.00%	12th Grade	76.50%

Trend and Variance Narrative Analysis

An evaluation of attendance across the academic spectrum reveals a distinctive cyclical pattern rather than a simple, linear downward progression. The data starts strong in the primary classes, shows a moderate decline through the middle school transition, encounters a pronounced secondary school recovery, and ultimately finishes with an expected dip during the final senior secondary years.

The Early Primary Baseline: Attendance starts at its peak in the 1st Grade at **93.50%**. Following this initial high point, a steady and gradual downward trend manifests from the 2nd Grade (**91.00%**) straight through to the 7th Grade, which registers a cyclical low of **83.50%**. This pattern is indicative of diminishing early-stage parental monitoring combined with shifting student routines as children enter early adolescence.

The Secondary Rebound Phase: Strikingly, this downward trajectory reverses completely upon entering the late middle and early secondary phases. Beginning in the 8th Grade, attendance figures push back upward to **87.00%**. This recovery intensifies throughout the 9th Grade (**88.50%**) and reaches an upper-tier threshold in the 10th Grade at **89.00%**. This substantial multi-year increase is directly tied to the heightened focus surrounding foundational secondary curricula, emerging accountability for public or board examinations, and stricter institutional monitoring policies implemented for high school cohorts.

The Senior Secondary Dropoff: Following the high marks achieved in the 10th Grade, the final transition reveals a sharp contraction. Attendance patterns fall below institutional baselines during the final two terms, with the 11th Grade breaking down to **79.00%** and the 12th Grade registering the lowest tier at **76.50%**. This distinct late-stage decline corresponds with senior-year realities: students reallocating traditional school hours toward off-campus university coaching, competitive entrance test preparations, or independent study blocks. While lower, these values accurately mirror the structural shift from classic secondary enrollment into self-directed pre-collegiate programs.
